Headwinds  
No worries

Eclino<sup>TM</sup>

A new electric drive system for high

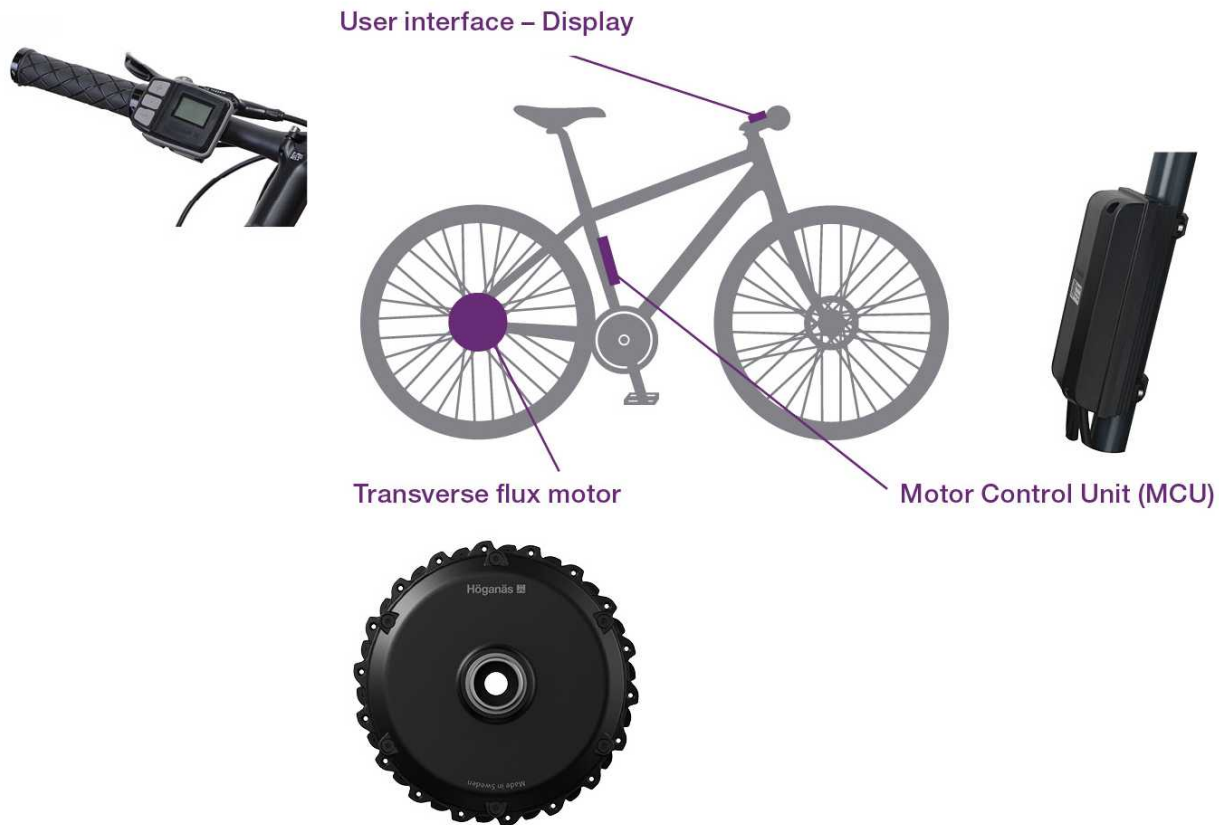

# From Powder to Eclino

# Eclino "Classic" – earlier introduced system

- Battery chosen by customer
- Torque sensors from Thun, IDbike and Santa Monica are compatible

# Eclino – news for 2015

# Core values and benefits

- Outstanding hill climbing ability (never gets overheated)
- Easy to install - plug & play
- Compact high performance, high torque
- High energy efficiency
- Efficient use of raw materials (reduced use of copper and permanent magnets)

# eCaravan

# What do we do?

- We develop and manufacture electric drive systems for bikes
- We produce our components in Sweden
- We have a preferred battery partner – Varta Microbattery GmbH
- We want to work in depth – in a project - with the bike manufacturer to adapt the drive system for their product
- We value safety very high
- We believe there are no "off the shelf" drive systems – at least not now

# Who are we?

- We are a separate department in a larger Swedish firm with our own independent mechanical, software and hardware designers, test engineers, production engineers, sales staff and management.
- We are around 30 heads
- We are used to work in tight cooperation with customers in a project structure
